

Day Five

Assignments

Part One

Readings

Source	Assignment
NSA	Manageable Network Plan [1]

Class Project

Continue to revise and enhance your customized Incident Response Tool Kit and supporting Poster.

In addition to an instance of an Incident Response/Computer Forensic Tool, your project should draw from your related work in this class. You may also draw from related assignments that you have completed for other classes as well.

Poster

Create a poster that illustrates the process that you employed to create your Tool Kit. The poster should begin with an abstract, or problem statement, that briefly but thoroughly explains the problem that your jump kit solves.

Journal Assignment

Find a current online news article that relates to the problem that your Tool Kit is designed to mitigate. Write a brief journal entry that explains how that article is relevant to your Tool Kit. Better articles will also illustrate the significance of your chosen problem
